SAFETY TRAINING

A Sudden Cardiac Arrest (SCA) can occur anytime and

SAFETY MANAGEMENT

anywhere – and cause death in a matter of minutes. When it occurs to a worker on a jobsite, in many cases, workers nearby can be thrust into a "first responder" role. These workers having proper First Aid/AED/CPR training can be the difference between a life or death outcome.

Having workforce personnel who are qualified in BOTH administering Cardiopulmonary Resuscitation (CPR) and operating an Automated External Defibrillator (AED) can dramatically increase a worker's chance of surviving a sudden cardiac arrest.

SMART's First Aid/AED/CPR training is conducted by highly experienced professionals who use these techniques in their everyday lives such as firefighters, paramedics and other first responders. These professionals provide the most effective training techniques and expose your workforce to real world experiences that keep all participants engaged.

Sudden Cardiac Arrest (SCA) facts:

- Approximately 325,000 deaths occur each year from SCA nearly 900 deaths per day!
- Less than 20% of people in the U.S. are equipped to perform CPR during a medical emergency.
- Brain death and permanent death start in as little as 4-6 minutes.
- SCA survival is reduced 7 to 10 percent with every passing minute without CPR and defibrillation.

Sudden Cardiac Arrest (SCA) is the third leading cause of death to people of all ages. SCA can cause death in a matter of minutes without immediate and proper First Aid, AED and/or CPR treatment.

A staggering fact is that 9 out of 10 victims die from SCA. However, when bystanders intervene immediately by giving CPR, survival rates can double – or even triple.

The importance of having your company's workforce trained in First Aid/AED/CPR can not be overstated. This ensures that personnel with this critical training are always on the jobsite to immediately respond with proper treatment until emergency medical support arrives.

Contact SMART to schedule First Aid/AED/CPR training for your company's workforce. It is one of the most important skills your personnel will ever learn or apply – **one that can deliver life-saving results!**
